ABOUT

Shaelyn Otikor-Miller spent 30 years inside a Fortune 500 financial institution, finishing as Senior Vice President and Head of Global Digital Workplace Strategy. She led Microsoft 365 and generative AI rollouts across 20 countries, managed a \$25M budget, and built the adoption systems that turned complex transformation into measurable human outcomes.

Today she speaks about what transformation actually takes: trust, honest communication, and the courage to tell the truth about why people resist change. She is also the founder of Beyond Boundaries Without Measures (BBWM), a 501(c)(3) nonprofit running a free AI and computer literacy lab in South Suburban Illinois, teaching the adults technology left behind. These two worlds are not separate. They are the whole point.

SIGNATURE TOPICS

01 AI Adoption is a Workforce Readiness Problem

Most AI rollouts fail at the human layer, not the technology layer. What organizations get wrong, and what it takes to move people through a transformation they didn't choose. For leaders who have to bring along a workforce, not just install new software.

Fit for: Organizations navigating AI adoption

02 The Digital Access Gap Corporate Leaders Keep Missing

Companies spend millions creating platforms for people who can barely scan a QR code. This talk identifies the gap corporate decision-makers rarely acknowledge and argues that closing it is a leadership responsibility, not a CSR footnote.

Fit for: Business leadership conferences

03 From the Boardroom to the Computer Lab

What running digital transformation at scale taught her. What opening a free computer training lab taught her. And what those two experiences revealed about each other.

Fit for: Nonprofit sector, leadership, and equity-focused gatherings
